Instructions
1. You have two .pdfs file "Settings Page Wireframe" and "Add Database Page Wireframe". These two files very closely resemble our Self serve platform offering. You need to create these two pages.
2. The required images and fonts are in their respective folders in the zipped file.
3. Requirements
    1. Pixel Perfection – Our customers take business impacting calls by looking at our platform so pixel perfection is a deal breaker.
    2. Functionality – What you see is what you get! (WYSIWYG) – Please make sure that the basic functionality works and nothing breaks.
    3. Readable code – You would be "coding the machine" but "coding for your collegue" sitting beside you. So we value clean scalable and readable code, rather than optimised unreadable code.
4. How to submit this assigment
    1. Option 1 – Share the github link of the repo with proper instruction of how to run your code locally on any of our developers laptop. If this doesnt work then it would be impossible to evaluate your hard work and we would have to opt out. Make sure your Readme.md is Industry standard and covers all instruction for our developers to follow clearly.
    2. Option 2 – (Preferred) – Deploy the project on any webserver (open source or paid) or third party apps. Then you can just share the url link with us. We are open to see what option you choose and why but there are no restrictions.
5. Please reply on the email thread for any questions.
